企業概要については、課題文書は古いので、2019 会計年度の 3 ページ目以降に従うこと。

1. 課題文書

Valve Software Corporation is a leader in the video game industry, with Counter-Strike, Half-Life 2, Left 4 Dead, Portal, and the popular digital distribution platform Steam. In September 2013, the United Kingdom's *WhatCulture* online magazine ranked Gabe Newell, the co-founder of Valve, on its list of the "five richest tech billionaires who dropped out of university." Newell acts as the CEO of Valve, but the company has been "boss free since 1996," as its website proclaims. "It's amazing what creative people can come up with when there's nobody there telling them what to do." Valve's unique organization structure caused a minor media blitz after someone posted the employee handbook online in the spring of 2012, but Valve has been functioning smoothly without bosses since it was founded. Newell and co-founder Mike Harrington, former Microsoft employees, wanted to create a flat, fast organization that allowed employees maximum flexibility. It sounds like a dream for employees, but many people don't adapt to the "no-structure structure" and leave for more traditional jobs. At Valve, everyone has a voice in making important decisions. Any employee can participate in hiring decisions, which are usually made by teams. There are no promotions, only new projects, with someone emerging as the de facto leader. Firings are rare, but teams decide together if someone isn't working out. Team meetings are highly informal and people are invited to share feelings as well as business ideas.

Contrast Valve's approach to that of Walmart, which achieves its competitive edge through internal cost efficiency. A standard formula is used to build each store, with uniform displays and merchandise. Walmart's administrative expenses are the lowest of any chain. The distribution system is a marvel of efficiency. Goods can be delivered to any store in less than two days after an order is placed. Stores are controlled from the top, although store managers have some freedom to adapt to local conditions. Employees follow standard procedures set by management and have little say in decision making. However, performance is typically high, and most employees consider that the company treats them fairly.

An even greater contrast is seen in many government agencies or nonprofit organizations that rely heavily on public funding. Most state humanities and arts agencies, for example, are staffed by a small number of highly trained employees, but workers are overwhelmed with rules and regulations and swamped by paperwork. Employees who have to implement rule changes often don't have time to read the continuous stream of memos and still keep up with their daily work. Employees must require extensive reporting from their clients in order to make regular reports to a variety of state and federal funding sources.[47]

IN PRACTICE

Valve Software

Exhibit 1.5 illustrates several structural dimensions and contingency factors of Valve Software, Walmart, and the state arts agency. Valve is a small organization that ranks very low with respect to formalization and centralization and has a medium degree of specialization. Horizontal collaboration to serve customers with innovative products is emphasized over the vertical hierarchy. Walmart is much more formalized, specialized, and centralized, with a strong vertical hierarchy. Efficiency is more important than new products and services, so most activities are guided by standard regulations. The arts agency, in contrast to the other organizations, reflects its status as a small part of a large government bureaucracy. The agency is overwhelmed with rules and standard procedures. Rules are dictated from the top and communication flows down a strong vertical chain of command.

Structural dimensions and contingency factors can thus tell a lot about an organization and about differences among organizations. These various organization design features are examined in more detail in later chapters to determine the appropriate level of each structural dimension needed to perform effectively based on various contingency factors.
